

AMENDMENTS

In the Claims

Please cancel claim 2 without prejudice.

5 Please amend claims 1, 3-5, 7, 9-11, 17, 29, and 31-32 as shown herein.

Claims 1 and 3-34 are pending and are listed following:

1. (currently amended) A configurable H-bridge circuit,
comprising:

10 a high switch connected to a voltage source;

a low switch connected to ground;

a first configuration of the high switch and the low switch connected
together and coupled to drive a motor; and

15 a second configuration in which the high switch and the low switch are
each configured as a discrete switch where the high switch is coupled as a first
component switch to a component and the low switch is coupled as a second
component switch to a different component ~~that can be coupled as a component
switch~~, the second configuration being different than the first configuration.

20 2. (canceled)

3. (currently amended) A configurable H-bridge circuit as recited in claim 1, further comprising:

a second high switch connected to the voltage source;

a second low switch connected to ground; and

5 wherein the first configuration includes ~~the high switch and the low switch connected together and coupled to drive a motor, and~~ the second high switch and the second low switch are connected together and coupled to drive the motor.

10 4. (currently amended) An application-specific integrated circuit (ASIC), comprising:

a configurable first H-bridge circuit that includes a first configuration as a first motor drive circuit to drive a first motor, and includes a second configuration as discrete switches, each of the discrete switches configured to
15 be coupled to independent components ~~that can each be coupled as a component switch;~~ and

a configuration register configured to maintain an indicator of the configurable first H-bridge circuit configuration as at least one of the first motor drive circuit or as the discrete switches.

20

5. (currently amended) An ASIC as recited in claim 4, wherein the configuration register maintains the indicator that the configurable first H-bridge circuit is configured as the discrete switches.

25 6. (original) An ASIC as recited in claim 4, wherein the configuration register is further configured to maintain a switch indicator that indicates a configuration of a discrete switch.

7. **(currently amended)** An ASIC as recited in claim 4,
wherein:

the configurable first H-bridge circuit includes a high switch connected
5 to a voltage source, and includes a low switch connected to ground; and

in the first configuration as a motor drive circuit, the high switch and the
low switch are configured to be connected together and coupled to drive the
motor.

10 8. **(original)** An ASIC as recited in claim 4, further comprising
at least a second H-bridge circuit configured to drive a second motor.

9. **(currently amended)** An ASIC as recited in claim 4, further
comprising:

15 a second H-bridge circuit configured as a ~~first~~ second motor drive
circuit;

a third H-bridge circuit implemented as a ~~second~~ third motor drive
circuit; and

wherein the second H-bridge circuit is configured to drive the first motor
20 and the third H-bridge circuit is configured to drive a second motor in an event
that the configurable first H-bridge circuit is configured as the discrete
switches.

10. **(currently amended)** A printing device, comprising:
a first motor configured for movable control of at least a first component
in the printing device;

a second motor configured for movable control of at least a second
5 component in the printing device;

a multiple H-bridge circuit including:

a first H-bridge circuit configured to drive the first motor;

a second H-bridge circuit configured to drive the second motor;

and

10 a third H-bridge circuit that includes a first configuration as a
motor drive circuit to drive a third motor, and includes a second configuration
as discrete switches that ~~can~~ are each configured to be coupled to a different
component as a component switch.

15 11. **(currently amended)** A printing device as recited in claim
10, further comprising a configuration register configured to maintain an
indicator of the third H-bridge circuit configuration as at least one of the motor
drive circuit or the discrete switches.

20 12. **(original)** A printing device as recited in claim 10, further
comprising a configuration register configured to maintain an indicator that the
third H-bridge circuit is configured as the discrete switches.

13. **(original)** A printing device as recited in claim 10, further comprising a configuration register configured to maintain an indicator that the third H-bridge circuit is configured as the discrete switches, the configuration register further configured to maintain a switch indicator that indicates a
5 configuration of a discrete switch.

14. **(original)** A printing device as recited in claim 10, wherein the third H-bridge circuit includes a high switch connected to a voltage source and includes a low switch connected to ground, and wherein the first
10 configuration includes the high switch and the low switch connected together and coupled to drive the third motor.

15. **(original)** A printing device as recited in claim 10, wherein the third H-bridge circuit includes a high switch connected to a voltage source and includes a switch connected to ground, and wherein the second
15 configuration includes at least one of the high switch and the low switch coupled as the component switch.

16. **(original)** A printing device as recited in claim 10, further
20 comprising an application-specific integrated circuit (ASIC) that includes the multiple H-bridge circuit, the ASIC further including a configuration register configured to maintain an indicator of the third H-bridge circuit configuration.

17. (currently amended) A method, comprising:

writing an indicator to a configuration register to indicate an implementation of a configurable H-bridge circuit as at least one of a motor drive circuit or as discrete switches;

5 coupling the configurable H-bridge circuit to drive a motor in an event that the configurable H-bridge circuit is implemented as a the motor drive circuit; and

coupling a switch of the configurable H-bridge circuit as a component switch in an event that the configurable H-bridge circuit is implemented as the
10 discrete switches.

18. (original) A method as recited in claim 17, further comprising maintaining the indicator of the implementation of the configurable H-bridge circuit, wherein the indicator indicates at least one of a first configuration of the
15 configurable H-bridge circuit as the motor drive circuit and a second configuration of the configurable H-bridge circuit as the discrete switches.

19. (original) A method as recited in claim 17, further comprising writing a switch indicator to the configuration register to indicate a
20 configuration of the component switch.

20. **(original)** A method as recited in claim 17, wherein coupling the configurable H-bridge circuit to drive the motor includes:

 connecting an output of a high switch of the configurable H-bridge circuit to an input of a low switch of the configurable H-bridge circuit, the high switch connected to a voltage source and the low switch connected to ground;
5 and
 coupling the high switch and the low switch to the motor.

21. **(original)** A method as recited in claim 17, further comprising
10 configuring an H-bridge circuit control according to the indicator in the configuration register to couple the configurable H-bridge circuit to drive the motor in an event that the H-bridge circuit is implemented as the motor drive circuit.

15 22. **(original)** A method as recited in claim 17, further comprising configuring an H-bridge circuit control according to the indicator in the configuration register to couple a switch of the configurable H-bridge circuit to a switched component in an event that the H-bridge circuit is implemented as the discrete switches.

20

23. (original) A method, comprising:

controlling a first movable component in a printing device with a first motor driven by a first H-bridge circuit of a multiple H-bridge circuit;

controlling a second movable component in the printing device with a second motor driven by a second H-bridge circuit of the multiple H-bridge circuit;

configuring a third H-bridge circuit of the multiple H-bridge circuit in a first configuration to drive a third motor in an event that the third H-bridge circuit is to be implemented as a motor drive circuit; and

configuring the third H-bridge circuit in a second configuration as discrete switches in an event that a switch of the third H-bridge circuit is to be implemented as a component switch.

24. (original) A method as recited in claim 23, further comprising

coupling the third H-bridge circuit to drive the third motor in the first configuration.

25. (original) A method as recited in claim 23, further comprising

coupling the switch of the third H-bridge circuit to a component in the second configuration.

26. (original) A method as recited in claim 23, further comprising

writing an indicator to a configuration register to indicate a configuration of the third H-bridge circuit.

27. **(original)** A method as recited in claim 23, further comprising:

writing an indicator to a configuration register to indicate a configuration of the third H-bridge circuit; and

5 coupling the third H-bridge circuit to drive the third motor in the first configuration according to the indicator maintained in the configuration register.

28. **(original)** A method as recited in claim 23, further comprising:

10 writing an indicator to a configuration register to indicate a configuration of the third H-bridge circuit; and

coupling the switch of the third H-bridge circuit to a component in the second configuration according to the indicator maintained in the configuration register.

29. (currently amended) One or more computer-readable media comprising computer executable instructions that, when executed, direct a printing device to:

5 write an indicator to a configuration register to indicate a configuration of a configurable H-bridge circuit as at least one of a motor drive circuit or as discrete switches;

configure the configurable H-bridge circuit in a first configuration to drive a motor in an event that the configurable H-bridge circuit is to be implemented as a the motor drive circuit; and

10 configure the configurable H-bridge circuit in a second configuration as the discrete switches in an event that a switch of the configurable H-bridge circuit is to be implemented as a component switch.

30. (original) One or more computer-readable media as recited in claim 29, further comprising computer executable instructions that, when executed, direct the printing device to:

couple an output of a high switch of the configurable H-bridge circuit to an input of a low switch of the configurable H-bridge circuit, the high switch connected to a voltage source and the low switch connected to ground; and

20 couple the high switch and the low switch to the motor in the first configuration that the configurable H-bridge circuit is implemented as the motor drive circuit.

31. (currently amended) A printing device, comprising:

means to drive a first motor to control a first movable component in a printing device;

5 means to drive a second motor to control a second movable component in the printing device;

means to configure a configurable first H-bridge circuit in a first configuration as a motor drive circuit to drive a third motor; and

means to configure the configurable first H-bridge circuit in a second configuration as discrete switches.

10

32. (currently amended) A printing device as recited in claim

31, wherein:

the means to drive the first motor is a second H-bridge circuit of a multiple H-bridge circuit that includes the configurable first H-bridge circuit;

15 and

the means to drive the second motor is a third H-bridge circuit of the multiple H-bridge circuit.

33. (original) A printing device as recited in claim 31, further

20 comprising means to couple the configurable H-bridge circuit to drive the third motor.

34. (original) A printing device as recited in claim 31, further

25 comprising means to couple a switch of the configurable H-bridge circuit as a component switch.
